MODULA'S TRAY CONFIGURATIONS

You can configure the Modula in different ways depending on how you plan to use it, with different types of picking bays.

- Single bay
- Internal bay
- Opposite bay
- Double bay
- External bay
- Displaced bay.

With Modula you can select the dual tray delivery system. This allows the operator to work on one tray in the bay, while the next is being collected for delivery once the first operation is completed.

The external bay facilitates worker activity when using mechanical aids like forklifts, zero-weight cranes or overhead hoists.

You can also carry out picking simultaneously on two sides of the machine or have access to trays on different levels.

MODULA INTEGRATES WITH ALL TECHNOLOGY

Modula is ideal for those who also need complete integration with other technologies such as:

- Robots
- Roller conveyor
- Put-To-Light systems
- Manipulators
- Zero Weight cranes.

Thanks to Modula WMS warehouse software, your VLM can be integrated with all ERP systems to connect the warehouse Modula into the company workflow and allow it to interact with the management system.

This way you can manage the materials and users registries, production orders, stock, spare parts, and you have improved control on stock and all warehouse movements: both picking and restoring.

With Modula, taking inventory is very easy, while producing dedicated analyses and reports ensures you have everything under control.
