Training Service

Description

Operational training service designed to enable customer personnel to safely and efficiently operate the equipment in accordance with recommended procedures and best practices.

Scope of Service

- Basic operational training for designated customer users, including:
 1. General machine operation
 2. Start-up and shutdown procedures
 3. Standard operation
 4. Best practices for use and safety
 - Q&A support during the initial usage phase
-

Service Exclusions

- Advanced maintenance or programming training
 - Process engineering or production optimization
 - Development of product-specific processes or recipes
 - Custom training beyond standard operational scope
-

Key Points / Commercial Conditions

- Number of participants limited depending on machine type and must be defined in advance
- Training language and documentation must be agreed beforehand
- Training duration defined according to scope and equipment type
- Additional sessions or extensions may be charged separately
- Customer must ensure availability of trained personnel during scheduled sessions
- Any delays caused by the customer may be considered billable time
